

This is how you measure the diameter of round tubing with the ICLETTA measurement tool:

- 1: Print this document in 100% size onto a A4 sheet of paper
- 2: Check the correct size by measuring the control stripe at the bottom
- 3: Cut out the measurement tool along the dotted line
- 4: Line up the black end of the measurement tool on the tubing
- 5: Wrap the other end of the tool tightly around the tubing
- 4: Read the measured value at the upper end of the black end

Please note that this tool only works on tubing with circular diameters. Oval tubing can not be measured this way.

Printing scale check: This stripe should be 150 mm wide:
